

## MICROWAVE DIATHERMY

# HM-801

Microwaves penetrate deeper into tissue, muscle and thereby enhancing local blood circulation in muscle. Subcutaneous organization and others can be warmed evenly without heating skin excessively. Microwave therapy can be applied to treatment portion of a patient with in dress just by turning radiator to treatment portion.

### Feature

- Any angle and direction for any treatment using microwave (2450MHz)
- Ratio of output time to resting time is selectable between 1:1 and 1:2 according to patients' conditions.
- Easy control of power on/off and strength, and simple installation with circular or oblong irradiator.

### Safety Function

- Operation starts only in zero [ZERO START].
- When the stimulus is over, a finishing beep.
- Overheating (80°C) is prevented with magnetron protective circuit.

R-Type

[Rectangular Irradiator]

CFDA

### Specifications

Power	AC 220V, 60Hz
Power Consumption	700W
Safety, Isolation	Class I, Type B
Output	0~240W
Output Frequency	2450MHz
Output Mode	continuous, pulsed
Timer	5~30min
Dimension	430x315x760(H)mm
Weight	28Kg

C-Type

[Circular Irradiator]
